SOP-030: UK Per-Product Pre-Order Message

Author: Nícolas Cartín Reyes, Lead Developer
Date: October 28, 2026
Scope: Echelon UK `Dynamic2026-UK` product template
Status: Live on Stride-6s-10

Purpose

Some UK products are sold before stock arrives. This SOP explains how to show a pre-order message and a "Pre-order now" button label on one product without affecting any other product.

How it works

- Optional product metafield `custom.preorder_message` (single line text, admin name "Pre-order message").
- When the metafield has a value, the template renders the message under the add-to-cart button and changes the available button label to "Pre-order now".
- Products without the metafield are unchanged.
- The product must be assigned to the `Dynamic2026-UK` template.

Turning it on for a product

1. Confirm the product uses the `Dynamic2026-UK` template.
2. Confirm the product can be bought: inventory policy allows selling, or stock has been added, and it is available on the Online Store.
3. Enter the approved message in `custom.preorder_message`, for example the expected dispatch date and the quantity arriving.
4. Check the PDP on mobile and desktop.

Turning it off

Clear the metafield when stock arrives. The message and label revert on the next page load. No theme change is needed.

Rules

- Message wording comes from the UK team and must be approved.
- Do not change inventory or "continue selling when out of stock" settings without the stock owner's approval.

Source

Code and changelog are in the `Dynamic2026-UK` repository (pull request #1 for the feature, #2 for the October 28 accessibility sync).
